EDUCATION

Bachelor of Science in Information Technology

Jesus Reigns Christian College, Malate, Manila

2023 – 2026

Information and Communication Technology

Raja Soliman Science and Technology High School, Binondo, Manila

2020 – 2022

SKILLS

Backend: Java, Spring Boot, Rust, Actix-web, REST APIs, PostgreSQL, MySQL, JWT, bcrypt, RBAC

AI & Automation: n8n, Claude Code, Anti-Gravity framework, API orchestration, webhooks, SaaS

Systems: Linux/Ubuntu, CLI, Server administration, Active Directory, Networking, DNS, Bash

Blockchain: Stellar Soroban, smart contracts, AES-256-GCM encryption

Tools: Git/GitHub, Bash scripting, DevTools, API reverse engineering

EXPERIENCE

AI Engineer — TambayanPH, Philippines

Feb 2025 – 2026

- Developed SaaS products integrating n8n automation with Claude Code for end-to-end AI-powered business solutions
- Implemented AI automation pipelines using the Anti-Gravity framework and Claude by Anthropic
- Client projects: VetLevel (Facebook automation for veterinary businesses) and RealmMLP↔Notion (reverse-engineered undocumented API for data sync)

Notable Client Projects:

- VetLevel — Built a Facebook automation tool for veterinary businesses to manage online presence and client interactions; combined AI automation with niche industry requirements
- RealmMLP × Notion Integration — Reverse-engineered undocumented API endpoints using browser DevTools network interception to sync RealmMLP data into Notion; delivered a fully functional integration from zero documentation

Network & System Engineer Intern — CallHounds Global / Virspacio

- Built DNS automation SDK with Java Swing for real-time ICMP/TCP network monitoring across infrastructure
- Managed remote servers, Active Directory, and Linux CLI-based outbound/inbound call routing

Data Entry Clerk (1 year)

- Maintained accurate data records and ensured quality control across multiple systems

PROJECTS

Blockchain EHR System

github.com/justrhey/capstone

Backend for blockchain-notarized electronic health records using Rust/Actix-web with PostgreSQL (20+ tables, 40+ endpoints). Integrated Stellar Soroban for on-chain record hashing with version history, AES-256-GCM field encryption, JWT authentication with role-based access control.

Co-Map

github.com/justrhey/Co-map

Community complaint mapping platform (Django REST + React) with MapLibre GL, 3D building extrusions, marker clustering across 10 categories, and a scoring/gamification engine (0–100). Rate limiting, profanity filter (EN+PH), Sentry monitoring. Deployed on Vercel + Supabase.

COMMUNITY

Core Member — TambayanPH (AI builders community)

Feb 2025 – 2026

Active contributor to the Philippines' AI builders community — collaborative workflow development, knowledge sharing, and mentorship around n8n automation and Claude Code.
